Abstract of JP2003012738

PROBLEM TO BE SOLVED: To obtain a new polymerizable resin composition which comprises a polymer and a polymerizable monomer and gives a cured polymer having sufficient water resistance, hot water resistance, heat resistance and weather resistance and further having excellent impact resistance, flexibility, extensibility and processability due to the decrease of a crustaceous property.

SOLUTION: This polymerizable resin composition comprises a polymer having cyclohexylmethyl groups (the cyclohexyl group may have one or more substituents) and a polymerizable monomer.
